

Scottsdale Arizona Footbed Company partners with 3D Digital

Foot Fitting is pleased to announce its partnership with 3D Digital Corp to develop scanning technologies to produce world class footbeds and orthotics. Foot Fitting has utilized 3D Digital's Corporation's extensive multi-industry scanning expertise to integrate a 3D Digital laser scanning with its own proprietary pneumatic foot capture technology.

This groundbreaking foot capture technology will be available to medical professionals in July 2005. Specialty sports retail and other market licensing opportunities will be available in Q4 2005.

Foot Fitting's 3D TruCapture™ technology is the most advanced dynamic foot capture technology available. It delivers the following benefits to licensees:

Pneumatic: A sophisticated air pillow dynamically allows the subtalar joint to be placed in neutral without deforming the fascia tissue of the foot.

3D Digital: The image capture of the foot is a digital three dimensional anatomically correct image of the foot.

For more information on this exciting new technology and licensing information, please email sales@footfitting.com
